- Measurement tape should not be tightened or loosened while taking body measurements.
- For taking circumference measurements the tape should be passed over the required area with one or two figures in between. This will provide ease.
- Before measuring the waist, tie a cord around the waist.
- If the customer has and deviation in the proportion of his body note it down. Be careful to note it without giving any idea (embarrassing) the person.
- To avoid mistakes, take measurement twice.
- Personal preference of the wearer should be asked for length, ease and style.

9.3 HUMAN BODY STRUCTURE

In order to cut and sew a fabric into any garment, one should first know the person's body shape and structure. The anatomy of the human figure is designed in a systematic manner. The height of body is divided into equal parts. This enables one to understand the calculations used in pattern making.

9.3.1 Eight Head Theory

Human body can be divided into 8 feet (8 heads) one feet is considered as measuring from head to chin (Figure 9.1).

First part	From hair to chin.
Second part	Chin to chest / bust
Third part	Chest to waist
Fourth part	Waist to hip circumference
Fifth part	From hip to mid thigh
Sixth part	From thigh to below knee
Seventh part	From knee to calf muscle
Eighth part	From calf to tip of toe
