leaves, rice flakes, mint, soya bean, cow pea, gingelly seeds and dates. Animal food sources include red meat, and fishes like herring and mackerel.

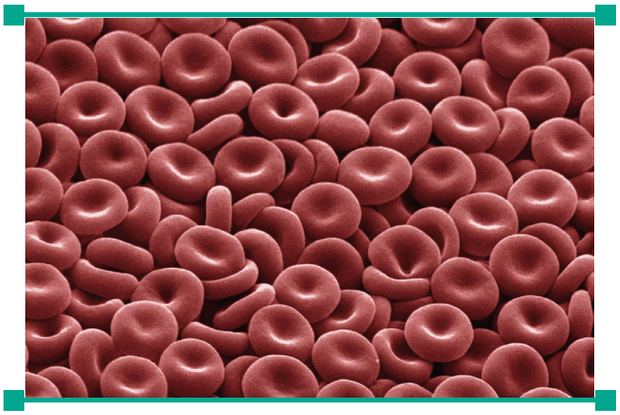

- **Deficiency**

Iron Deficiency anemia: When there is an insufficiency of iron for the formation of hemoglobin, the RBC's become pale and small. The resulting anemia is called hypochromic and microcytic anaemia which is the most common form of anaemia throughout the world affecting women mainly in their reproductive years, infants and children.

▲ Normal RBC

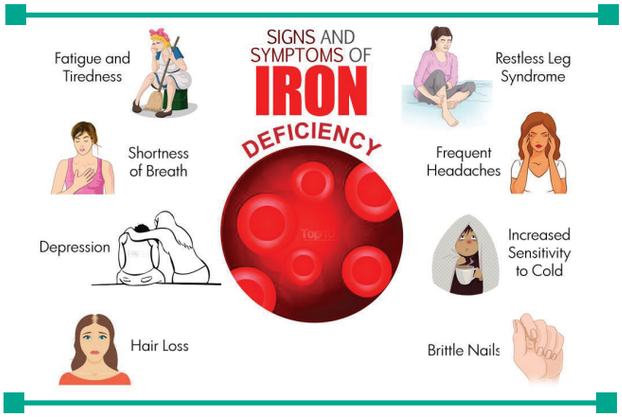

▲ Microcytic and hypochromic RBC

Causes: Low iron intake, blood loss, malabsorption chronic diseases, obesity

Signs of Iron Deficiency

- Fatigue
- Muscle weakness,
- Pale color
- Decreased resistance to infection
- Spoon nails(Koilonchyia)
- Angular stomatitis
- Dizziness
- Dimness of vision
- Insomnia
- Headache

Regular consumption of iron rich foods, vitamin C rich foods, seasonal fruits and vegetables can definitely prevent anemia.
