on land, the family can save money on buying vegetables or sell these vegetables to earn money.

c. **Community facilities:** These are those facilities which are common for all members of a community. Parks, libraries, post office, police and fire protection, banks, hospitals, transport facilities, roads, railways, electricity, water supply, markets, community centres and ration shops are examples of community facilities. All families can avail these facilities without directly paying for them but indirectly paying for them through taxes.

Activity 3

- Develop a plan to study for your examination.
- Identify all of the resources you would use to complete this plan.
- Classify each resource as to whether it is material or human.
- Does this plan use more of one classification than another? Why?

7.4.2 Characteristics of Resources

1. All resources are useful and all help to achieve goals.

One cannot call energy or time as a resource if it is wasted or not used. If a piece of land is lying vacant, it is not a resource, only when a family grows vegetables on it, does the land become a resource.

2. All resources are limited.

There is a limit to a person's knowledge, skill, energy, material goods and money available to the family.

3. All resources are inter-related.

A resource cannot be used in isolation. If a homemaker has to go to the market, she will use her knowledge, skill of bargaining, time, energy, money, market and transport to achieve this goal.

4. Resources can be substituted.

One can exchange one resource for another. A family uses time, skill and energy of a servant and gives her money in exchange. Similarly, material goods can be bought in exchange of money. One can exchange knowledge by paying tuition fees.

5. All resources need to be managed.

Since all resources are limited, they need to be utilized properly, otherwise they may be wasted. Time and energy have to be managed by work simplification techniques, proper postures and labour saving devices.

7.5 TIME AND ENERGY MANAGEMENT

Many activities are performed throughout a day. Some of the activities like eating, cooking, exercising, sleeping, bathing and entertaining are also carried out along with work related activities but all these are to be completed within the available time that is 24 hours. If energy will not be rebuilt from time to time the work would cease. The capacity needed to perform these activities is called energy.

Energy is the capacity to do the work. It means that just as available time as a resource is limited, we also have limited amount of energy. So we can say that within limited time we must finish all our work with our limited energy.
