- Think of an alternative plan of action for emergency.
- Allow for rest and leisure time activities.
- Combine activities (Dovetail) for better time utilization of time.

Activity 5

- Develop a time schedule for the coming week. Use this management tool (time schedule) for the week. Note on the time schedule for the week the use of your time resource and the factor that created the change.
- Record the use of energy resources for each day for one week.

7.5.3 Energy Management

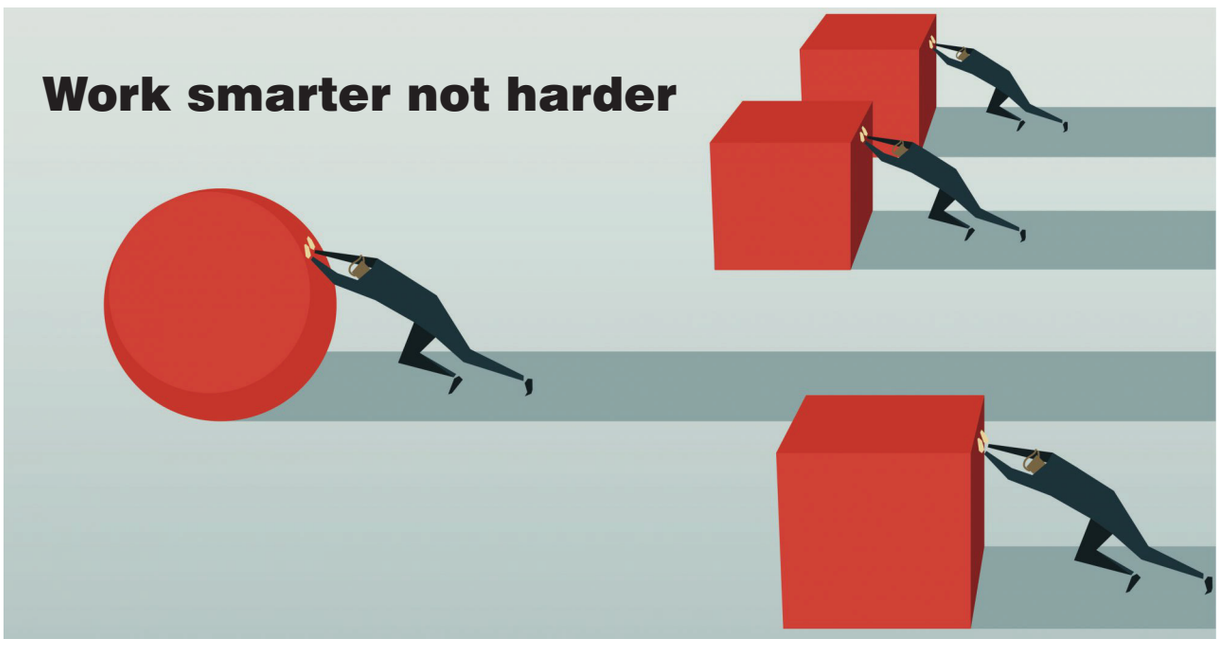

Energy management is a difficult task as the energy expenditure for various activities depends on the individuals physical and mental health. Various efforts are needed to perform different household tasks. They are mental effort, visual effort, manual effort, torsal effort and pedal effort.

During the day, different types of activities are performed requiring different amount of energy.

i. **Heavy activities** like running, jogging and mopping requires large amount of energy.
ii. **Moderate activities** like sweeping, ironing and cooking require average amount of energy.
iii. **Light activities** like reading, watching T.V. and listening to music need very little energy.

7.6 Work Simplification

Work simplification is making work easier. According to **Nickell and Dorsey (1959), "it is the conscious seeking of simplest, easiest and quickest method of doing work. "It aims at accomplishing more work with limited amount of time and energy.**
