The primary source of contact between the individual and external world and any intellectual activity depends on experiences coming through senses. Even mental activities such as concentration, reflection, conception, imagination, association, recollection etc., have their basis in sensory experiences. Mind like stomach, works on what it is fed. This feeding comes through senses. The raw material for mental activity is provide by

i. Direct Experiences: Such experiences are gained by the pupils through excursions and trips etc.,
ii. Representative Experiences: This type of experiences are less concrete but are quite useful. This type of experiences are provided by models, specimens, film strips, radio etc.,
iii. Verbal and Symbolic Experiences: Such experiences are those which the pupils gain through word-oral or written. This type of experiences are very abstract and occur at conceptual level. E.g. verbal illustrations. This type of experience can not be properly followed at the initial stages of child-learning so at initial stage more emphasis be laid on direct and representative experiences.

The above cone represents the material used for audio-visual instructions.

The theory of audio-visual instruction needs that education must make learning permanent and experiences usable. The advocacy for the use of new material for improving instructions is based on the fact that the verbalistic learning is out

In the picture below are shown various experiences

Edgar Dale's Cone of Experience
