Cereal Cookery

Experiment No: 3

Date:

Aim: To determine the best method of cooking of rice and preparing a dish by selecting any one of the cereal.

Materials required:

Raw rice, water, pressure cooker, gas stove, pan and lid

Procedure:

Take 50 grams of rice and cook in 150 ml of water.

Variations:

1. Straining – use 300 ml of water.
2. Absorption- In this method cook the rice with an equal or slightly greater volume of water, then cook over low heat until the rice has absorbed all the water
3. Pressure cooking: Add rice and water in the pressure cooker. Close the lid and pressure cook. Open the lid after the pressure from the cooker is released.

Result:

Method	Time in Minutes	Texture	
		Before cooking	After cooking
Straining			
Absorption			
Pressure Cooking
