b. Motor Skills Development during Babyhood.

After the fast growth spurt in infancy, the growth rate of the baby is slow. Motor development means the ability to control movement of several parts of the body through coordinated movement of muscles and limb. The sequences of postural control and locomotion among babies as reported by Schiamberg are as follows

Table 2 Postural Control and Locomotion during Babyhood

Age	Development
1st month	Holds chin up
2nd month	Holds chest up Rolls from side to back
3rd month	Reaches and misses object
4th month	Sits with support.
5th month	Sits on lap and grasp objects
6th month	Sits on high chair and grasp dangling object
7th month	Sits alone and starts to crawl
8th month	Stands with help
9th month	Stands holding furniture
10th month	Creep
11th month	walking with support
12th month	Pulls to stand by using furniture
13th month	Climb stairs
14th month	Stands alone
15th month	Walks alone

In this sequence of development it can noted that the development proceeds from head to foot as shown in figure 6

c. Social Development

The baby begins to communicate with others by gestures and also develops close relation with care givers like mother and father. At about five weeks of age, the baby smiles in response to patting. By the second month it recognizes his/her mother and by the third month the baby will turn its head in response to human voice. Once the babies get attached to their mother they show fear on separation.

d. Emotional Development

Until use of language begins, it is emotions that make adults know the needs of baby. As age increases, emotions become less diffused and more specific and differentiated in relation to cause, and they can be aroused by a wide variety of stimuli. It is shown in figure 7

e. Cognitive Development

According to Piaget's theory babyhood is the "sensory motor" stage. Babies understand the permanence of objects and people. They visually follow the displacement of objects and begin to use instruments and tools. They also understand discipline and what behaviour is appropriate and in appropriate. They also understand the concepts of words like "please" and "thank you".

f. Language Development

Language development is an important means of becoming independent for the baby. It gives him a new power to communicate their feeling to others.

- Before the baby speaks words, they show the ability to produce vowel and consonants sounds.
