DO YOU KNOW?

The most important activity of Anganwadi Centre (AWC) under Integrated Child Development Services (ICDS) programme is growth monitoring of children from birth to five years. Growth monitoring means keeping a regular track of the growth and development of the child with the help of plotting the child's weight, taken every month or quarter, on the growth chart and joining these weight points with a line to form the growth curve. In the following chart green coloured zone denotes normal body weight, yellow coloured zone denotes moderately underweight and reddish orange coloured zone denotes severely underweight.

iv. Body build

Children have an endomorphic or mesomorphic or ectomorphic type of body build based on their gene make up, diet and physical activities.

v. Bones

Bone development consist of growth in bone size, change in the number of bones and composition. The bones calcify at different rates in different parts of the body. Bones become harder and stronger, giving the child a firmer shape and protecting internal organs.

vi. Teeth

At the beginning of early childhood the baby has all of their milk teeth. In the last year of early childhood
