

- **Anger**

Anger is expressed when needs are not fulfilled. It is expressed through screaming, withdrawal, destructive and disrespectful behaviour.

- **Fear**

Fear is still found in late childhood. A large proportion of the fears shown in childhood persist into the adulthood.

- **Anxiety**

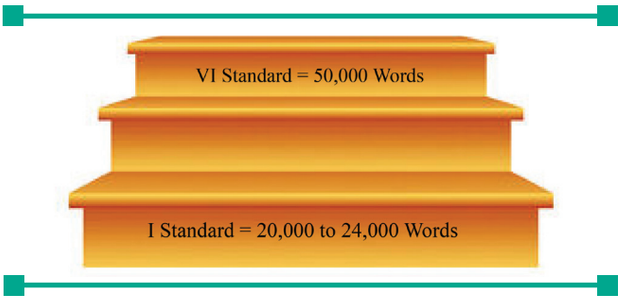

Children's anxiety increases somewhat with maturity. This anxiety makes children bored, restless and disturbed and they cannot concentrate. They feel insecure and show their anxiety by nervous mannerism and speech problems.

### 5. Cognitive Development

As a child develops there are considerable changes in his mental abilities which include imagination, memory, creativity, questioning and perception. They can also develop a plan to meet desired goal. They have a better understanding of spatial concepts of causality of categorization of inductive reasoning. Children begin to read and write and start gaining skills in reading and writing.

### 6. Language Development

Linguistic skills are improved or acquired by an individual with the help of parents and from the world outside the family such as television, radio, books and peers.

Children in the first grade, on average know about 20,000 to 24,000 words. By the sixth grade they will know about 50,000 words. Not only do older children learn new words, they also tend to learn new meanings for old words. The length of sentences increases from 6 years. The characteristic chatterbox stage of early childhood is replaces by more controlled and selective speech.

**CASE STUDY**

Harish has difficulty to do home work, cannot do quiet tasks or activities. He dashes around, touching or playing with anything and everything in sight and is very impatient. He also blurts out inappropriate comments, shows his emotions without restraint, and acts without regard for consequences.

From above case study what are your inferences about his condition? What is the specific name given to this condition?

Answer: Harish is hyper active and his condition is called as "Attention Deficit Hyperactivity Disorder".

## 2.2.4 Children Wth Special Needs

All children are 'unique' yet similar to one another in most aspects of growth.
