Educational Needs involve and include such activities that require 'doing'. Writing, playing, drawing, painting, knitting and even dancing are some much activities.

2.2.4.4 Children with Impaired Speech

The main purpose of speech is effective communication. When speech is defective communication is also defective.

Causes of Speech Defects

There are many causes for speech defects. They are as follows:

a. **Physiological causes**: Defects and deformities of the larynx and the vocal cords affect the speech produced. Incomplete development of the skull and head produces a cleft palate and cleft lip which produce speech defects

b. **Neurological causes**. When nerves connected with the areas of speech and learning process are impaired, some type of speech defect or disorder of articulation occurs

c. **Psychogenic Causes**. These are causes related to one's mind. Some types of stuttering are purely psychogenic in origin. General self consciousness added with speech defect may produce stuttering.

d. **(d) Sociological causes**. Some speech habits such as too rapid or too slow speech, or speaking in the low tones insisted by the parent may lead to speech defects.

Special need of children with speech defects

Physical needs

Surgery can correct some of the physiogenic causes like cleft palate, extremely enlarged tonsils, adenoids, etc. Motor activities, dramatic play of all kinds, excursions, discussing and planning group activities will help in developing correct speech patterns.

Educational Needs

Classes under special teachers will be useful for correction of pronunciation

Emotional needs

Children should be given opportunities to listen to stories. The teacher and parents should always make it a point to pronounce words clearly themselves.

2.2.4.5 Mentally Challenged Children

The intelligence possessed by a normal individual is said to be between 90 and 110 I.Q. Some children possess less than average intelligence and they are said to be mentally challenged or mentally handicapped.

Meaning of I.Q.

The letters IQ stand for Intelligence Quotient. It is a measure of intelligence. The formula used to calculate the I.Q. is $\frac{MA}{CA} \times 100$. MA stands for Mental Age and CA stands for Chronological Age. The mental age of a person is found out by intelligence tests. If the mental age corresponds with his chronological age or the physical age, then his mental growth is said to be normal. The mentally retarded children have a lower mental age than their chronological age.

Classification of mentally challenged people

Depending on the I.Q possessed, mentally challenged people/children are classified as slow learners, challenged, moderately challenged and severely challenged.
