Table A1.1 Systematic developments in physics over centuries (*Cont*)

▪ 20th century developments	
▪ Study of black body radiation	Max planck(around 1900)
▪ Discovery of an electron	J.J.Thomson
▪ Rutherford atomic model	Rutherford(1910s)
▪ Study on radioactivity	Marie Curie(1920s and 30s)
▪ Special theory of relativity, Photo electric effect, Existence of atom(1905), $E=mc^2$	Albert Einstein
▪ Revolution of physics after Newton	
▪ New Idea of space and time	
▪ The General theory of relativity(Greatest theory of 20th century)- 1915	
▪ Study of specific heat capacities	
▪ Study of atoms	
▪ Bohr atom model (1912)	Niels Bohr
▪ Behavior of electron, proton – Schrodinger equation	Schrodinger
▪ Uncertainty principle	Heisenberg
▪ Formulation of Quantum Mechanics	Paul Dirac
▪ Formulation of quantum field theory	Dirac, Feynman, Schwinger
▪ Particle physics, standard model	Gellman, Weinberg, Abdus salam
▪ X-ray diffraction(1930s)- Paved way to understanding the materials	
▪ Raman effect	C.V. Raman(India)
▪ Study of stars and black holes	Chandrasekhar(Indian origin)
▪ Invention of transistor(1947)	John Bardeen, Walter Brattain,William Schokley
▪ Classification of stars using temperature (Astro thermodynamics), Saha ionization formula	Megnad Saha(India)
▪ Field of Cosmology (1920s)	Eddington, Schwarchild
▪ Expanding universe model(1922)	Thomas Friedmann
▪ Discovery of redshift	Edwin Hubble
