- The motion of a satellite around the Earth

These two circular motions are shown in Figure 2.5

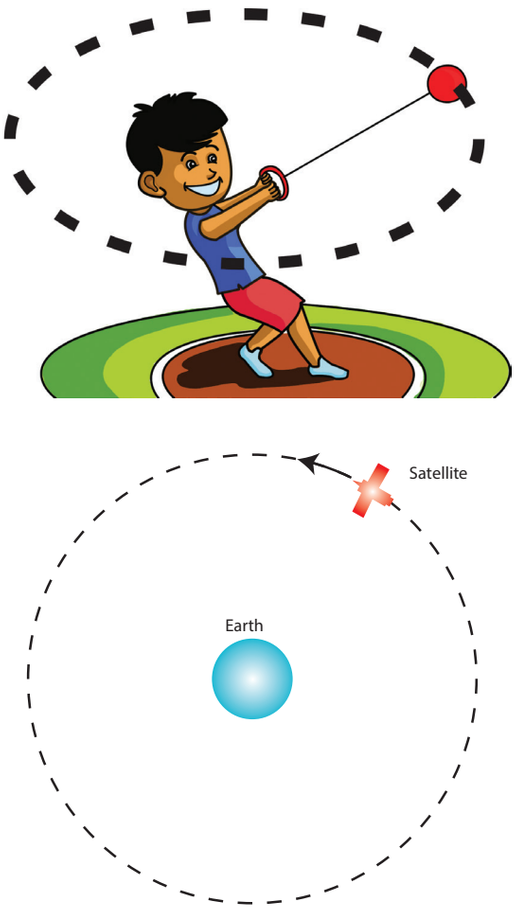

Figure 2.5 Examples of circular motion

c) Rotational motion

If any object moves in a rotational motion about an axis, the motion is called 'rotation'. During rotation every point in the object transverses a circular path about an axis, (except the points located on the axis).

Examples

- Rotation of a disc about an axis through its centre
- Spinning of the Earth about its own axis.

These two rotational motions are shown in Figure 2.6.

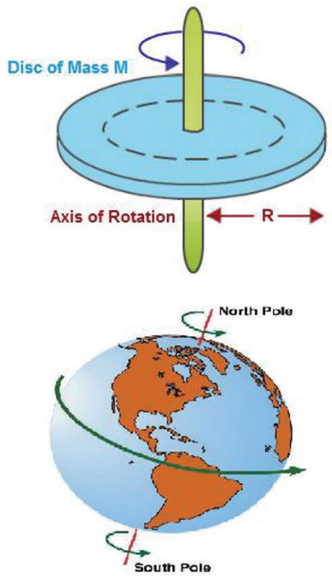

Figure 2.6 Examples of Rotational motion

d) Vibratory motion

If an object or particle executes a *to–and–fro* motion about a fixed point, it is said to be in vibratory motion. This is sometimes also called oscillatory motion.

Examples

- Vibration of a string on a guitar
- Movement of a swing

These motions are shown in Figure 2.7
