CALCULATION

Mass of the sphere M = ... kg

(Known value is given)

Radius of the sphere R =. . . . . .metre

Moment of inertia of a solid sphere

about its diameter $I_d = \frac{2}{5} MR^2 = \ldots\ldots\ldots\ldots$ kg m^2

RESULT

The moment of inertia of the given solid sphere about its diameter using Vernier caliper I_d = …….. kg m^2
