- Take sufficient amount of reading, say closer to room temperature
- The observations are tabulated
- Draw a graph by taking time along the x axis and excess temperature along y axis.

**MODEL GRAPH**

**RELATION BETWEEN TIME AND TEMPERATURE**

ROOM TEMPERATURE ($T_0$) = _____°C

## OBSERVATIONS

Measuring the change in temperature of water with time

| Time (s) | Temperature of water (T) °C | Excess temperature ($T - T_0$) °C |
|---|---|---|
| | | |

## RESULT

The cooling curve is plotted and thus Newton's law of cooling is verified.
