DO YOU KNOW?

The International Date Line is not straight. If the line is drawn straight, two places in the same country would have different dates. So the International Date Line is found zigzag in certain places to avoid confusion.

Earth Grid

The imaginary lines of latitude and longitude form a grid like pattern on the surface of the earth, known as the **'Earth grid'** or **'Geographic grid'.**

Earth grid

To locate a place exactly on earth, the latitudinal and longitudinal extensions are required.

Longitude and Time

As many as **360 lines of longitude** are drawn to connect the North and South Poles around the Earth 180° on the Eastern Hemisphere and 180° on the Western Hemisphere. Time is calculated on the basis of the lines of longitude.

Fact

- The Earth takes one day to rotate on its axis.
- 1 day = 24 hours
- 1 hour = 60 minutes
- 24 hours = 24 x 60 = 1440 minutes
- The angle of the earth = 360 °
- 360 ° = 360 Longitudes
- 360 ° = 1440 minutes
- So 1 ° = $\frac{1440}{360}$ = 4 minutes
- In 4 minutes = 1°rotation
- In 60 minutes = $\frac{60}{4}$ = 15° rotation
- So, in an hour (60 minutes) the earth rotates 15°
