2. Say True or False:

(i) (−10,20) lies in the second quadrant.

(ii) (−9, 0) lies on the *x*-axis.

(iii) The coordinates of the origin are (1,1).

Z8S7Q9

3 Find the quadrants without plotting the points on a graph sheet.

(3, −4), (5,7), (2,0), (−3, −5), (4, −3), (−7,2), (−8,0), (0,10), (−9,50).

4 Plot the following points in a graph sheet.

A(5,2), B(−7, −3), C(−2,4), D(−1,−1), E(0, −5), F(2,0), G(7, −4), H(−4,0), I(2,3), J(8,−4), K(0,7).

5 Use the graph to determine the coordinates where each figure is located.

a) Star _____

b) Bird _____

c) Red Circle _____

d) Diamond _____

e) Triangle _____

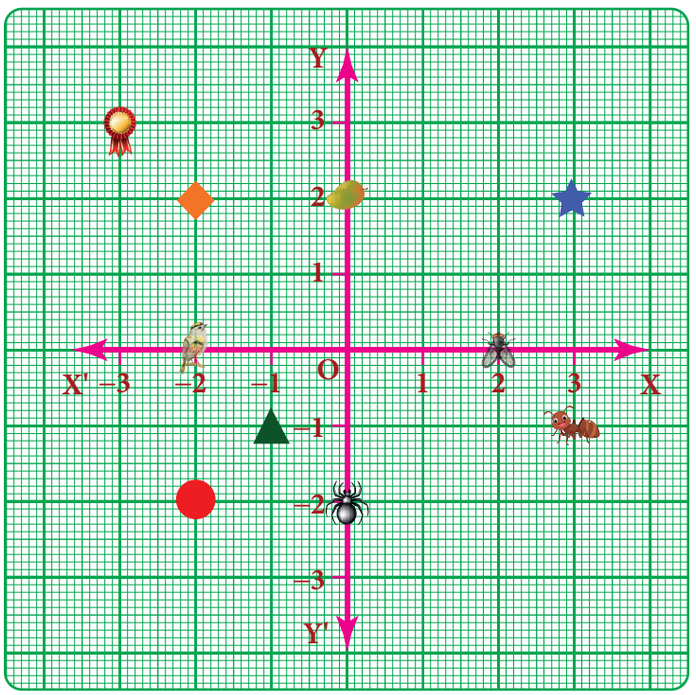

f) Ant _____

g) Mango _____

h) Housefly _____

i) Medal _____

j) Spider _____

3.9.7 To obtain a straight line

Now, we know how to plot the points on the graph. The points may lie on the graph in different order. If we join any two points we will get a straight line.

Example 3.41

Draw a straight line by joining the points A (−2,6) and B (4,−3)

Solution:

The given first point A (−2,6) lies in the II quadrant and plot it. Second point B (4,−3) lies in the IV quadrant and plot it.

Now join the point A and point B using scale and extend it. We get a straight line.

Note:

The straight line intersects X axis at (2,0) and Y axis at (0,3).
