10. If a mattress is marked for ₹7500 and is available at two successive discounts of 10% and 20%, find the amount to be paid by the customer.

Objective Type Questions

11. A fruit vendor sells fruits for ₹200 gaining ₹40. His gain percentage is

(A) 20% (B) 22% (C) 25% (D) $16\frac{2}{3}\%$

12. By selling a flower pot for ₹528, a woman gains 20%. At what price should she sell it to gain 25%?

(A) ₹500 (B) ₹550 (C) ₹553 (D) ₹573

13. A man buys an article for ₹150 and makes overhead expenses which are 12% of the cost price. At what price must he sell it to gain 5%?

(A) ₹180 (B) ₹168 (C) ₹176.40 (D) ₹88.20

14. What is the marked price of a hat which is bought for ₹210 at 16% discount?

(A) ₹243 (B) ₹176 (C) ₹230 (D) ₹250

15. The single discount in % which is equivalent to two successive discounts of 20% and 25% is

(A) 40% (B) 45% (C) 5% (D) 22.5%

4.4 Compound Interest

The most powerful force in this universe is_____. How would you complete this quote? The world renowned physicist Albert Einstein completed this quote with the word **Compound Interest.**

When money is borrowed or deposited on simple interest ($I = \frac{PNR}{100}$), then the interest is calculated evenly on the principal throughout the loan or deposit period.

Try these

1. The formula to find the simple interest for a given principal is _____.
2. Find the simple interest on ₹900 for 73 days at 8% p.a.
3. In how many years will ₹2000 become ₹3600 at 10% p.a simple interest?

In post offices, banks, insurance companies and other financial institutions, there is another type of interest calculation on offer. Here, the interest accrued during the first time period (say 6 months) is added to the original principal and the amount so obtained is taken as the principal for the second time period (that is, the next 6 months) and this keeps going on, up to the fixed time agreement between the banker and the depositer.
