Finally, 

Shape : All same ✓ **Colour** : All different ✓
Shade : All same ✓ **Number** : All different ✓

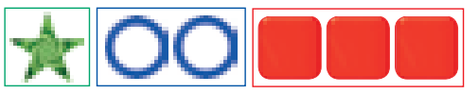

Now, this completes the rules for a SET.

Now, the teacher asks the students to find two more **SET**s from Fig.7.13. Let us check the **SET** again.

1. 

Shape : All same ✓ **Colour** : All same ✓
Shade : All different ✓ **Number** : All same ✓

Yes, This is a SET.

2. 

Shape : All different ✓ **Colour** : All different ✓
Shade : All different ✓ **Number** : All different ✓

Yes, This is a SET.

Think

For the given set of **12 cards** from Fig.7.13 **7 SETs** are possible. Explore. (repetition of cards allowed).

Again , the teacher makes an arrangement of cards and asks them to check **whether, it forms a SET?**

3. 

Shape : All same or all different ✗ **Colour** : All same or all different ✗
Shade : All same or all different ✗ **Number** : All same or all different ✗

No, this is not a SET.

Since, the above **SET** does not complete the **SET** rule.

Thus,we come to know a **SET** consists of **3 set of cards** in which each individual feature is either **all same** on each card or **all different** on each card.

Activity

Choose the correct card to complete the perfect **SET**. One is done for you.
