

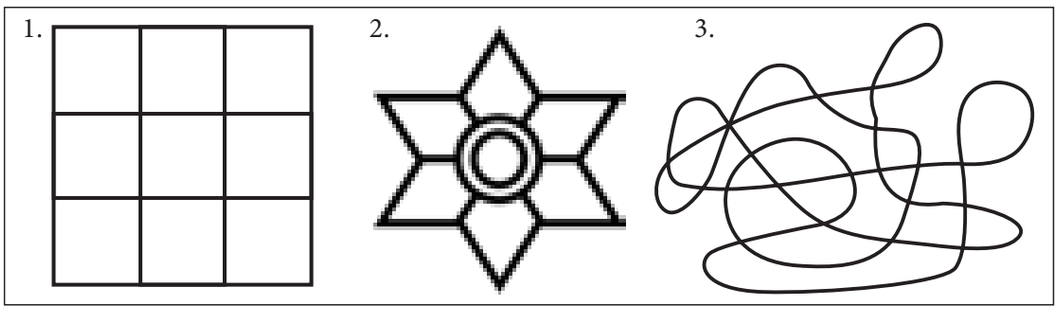

Fig. 7.14

Fig. 7.15 , shows how each group is coloured

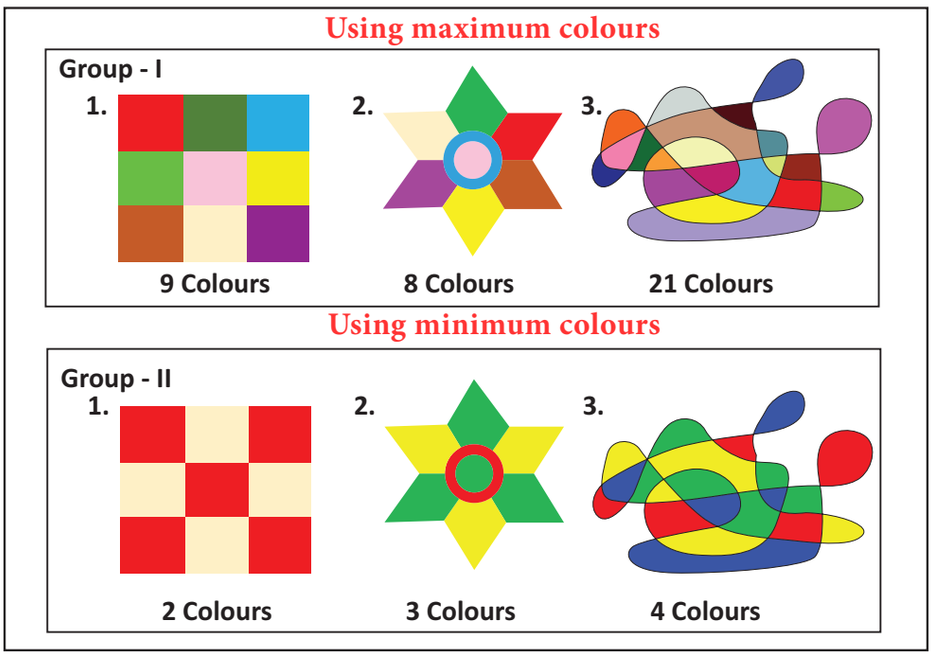

Fig. 7.15

From this investigation, we will get results. Which could be more interesting , if we want to colour a map.

Map colouring is about the colours that must be chosen for regions in a map, which make bordering regions with different colours. Let us learn more from the following examples.

Example 7.6

Colour a map of South India (Fig. 7.16) with the fewest number of colours.

Solution:

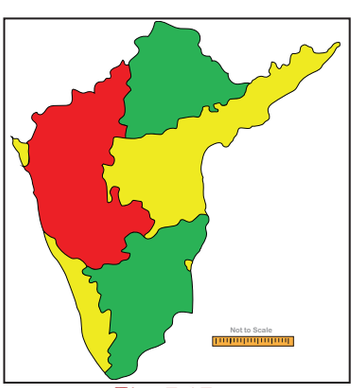

Fig. 7.17

This is one of the solutions with minimum number of colours . Try for more solutions.
