Example 2.2

A spinner of radius 7.5 *cm* is divided into 6 equal sectors. Find the area of each of the sectors.

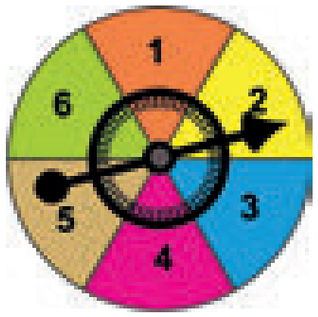

Fig. 2.15

Solution:

Radius, $r = 7.5$ *cm* and $n = 6$.

Area of each of the sectors, $A = \frac{1}{n} \times \pi r^2$ *sq. units*

$$= \frac{1}{6} \times \pi \times 7.5 \times 7.5$$

$$= 9.375\pi \text{ sq. cm}$$

Example 2.3

Kamalesh has a dining table, circular in shape of radius 70 *cm* whereas Tharun has a circular quadrant dining table of radius 140 *cm*. Whose dining table has a greater area? $\left(\pi = \frac{22}{7}\right)$

Fig. 2.16

Solution:

Area of the dining table with Kamalesh $= \pi r^2$ *sq. units*

$$= \frac{22}{7} \times 70 \times 70$$

A = 15400 *sq.cm* (approximately.)

Fig. 2.17

Area of the circular quadrant dining table with Tharun

$$= \frac{1}{4}\pi r^2 = \frac{1}{4} \times \frac{22}{7} \times 140 \times 140$$

A = 15400 *sq.cm* (approximately.)

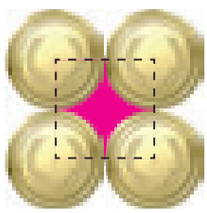

We find that, the area of the dining tables of both of them have the same area.

Think

If the radius of a circle is doubled, what will happen to the area of the new circle so formed?

Example 2.4

Four identical medals, each of diameter 7*cm* are placed as shown in Fig. 2.18. Find the area of the shaded region between the medals. $\left(\pi = \frac{22}{7}\right)$
