15.9.2 Practice in your daily life

- Do not litter the environment by throwing plastic items.
- Do not use Thermocol (resin code #6 PS) for your school projects.
- Do not use one-time use or throwaway plastics like plastics bags, tea cups, Thermocol plates and cups, and plastic straws.
- Do not burn plastics since they release toxic gases that are harmful to our health and contribute to climate change.
- Burning PVC plastic releases dioxins which are one of the most dangerous chemicals known to humans.
- Do not eat hot or spicy food items in plastic containers.
- Segregate your plastic waste and hand this over to the municipal authorities so that it can be recycled.
- Educate at least one person per day about how to identify the resin codes and avoid unsafe plastics (resin code #3 PVC, #6 PS and #7 ABS/PC).

Points to Remember

- Carbon is an inseparable chemical entity associated with living things.
- Carbon chemistry is also called as living chemistry.
- Carbon is found both in free state as well as combined state in nature.
- Friedrich Wohler is called Father of Modern Organic Chemistry.
- Carbon atom links repeatedly to itself through covalent bond to form linear chain, branched chain or ring structure.
- Charcoal, graphite and diamond are the allotropes of carbon.
- In diamond atoms are arranged in repeated tetrahedral fashion.
- All the allotropic forms of carbon are solids whereas its compounds exist in solid, liquid and gaseous state.
- The resin code represents the polymer used in making of plastics. The resin codes are numbered from 1 to 7.
- One-time use plastic causes health problems for humans, plants and animals.

A-Z GLOSSARY

Allotropes	Different forms of an element.
Allotropy	Property by which an element can exist in more than one form.
Catenation	Binding of an element to itself or with other elements through covalent bonds.
Harmful plastics	Plastic in which toxic and harmful chemicals are used.
Isomerism	Phenomenon in which same molecular formula may exhibit different structural arrangement.
Isomers	Compounds that have same molecular formula but different structural formula.
One-time use plastic	Use and throwaway plastics.
Organic carbon compounds	Compounds of carbon obtained from living organisms.
Plastics	Major class of catenated organic carbon compounds made from liquid polymers called 'resins' added with some additives.
Tetravalency	Tendency of carbon to share its four electrons with that of other atoms to complete its octet.
