| **Bivalent** | Homologous chromosomes before their duplication in meiosis. |
| **Centromere** | kinetochore or primary constriction. |
| **Chiasma** | Point of contact and interchange between chromatids of two homologous chromosomes. |
| **Chromatids** | Two identical longitudinal halves of a chromosome which share a common centromere with a sister chromatid. |
| **Diploid** | Cell having two complete sets of chromosomes. |
| **Haploid** | Cell having a single complete set of chromosome. |
| **Interphase** | Resting phase of the cell between two cell divisions. |
| **Isodiametric** | Having equal diameter of cells or other structures. |
| **Osteocytes** | Bone cells present between the lamellae in fluid filled spaces called lacunae. |
| **Synapsis** | Pairing of homologous chromosomes during meiosis. |
| **Tetrad** | Four haploid cells arising from meiosis formed from four associated chromatids during synapsis. |
