23.9.3 Feed Management

Dairy cattle need balanced rations containing all nutrients in proportional amounts and food additives which contain minerals, vitamins, antibiotics and hormones to promote the growth of animals, good yield of milk and to protect them from diseases. The daily average feed ratio of a milking cow is:

(i) 15-25 kg of roughage (dry grass and green fodder)

(ii) 4-5 kg of grain mixture

(iii) 100-150 litres of water

DO YOU KNOW?

Dr. Verghese Kurein, was the founder of National Dairy Development Board (NDDB) and was called the **Architect of India's Modern Dairy Industry** and the **Father of White Revolution.** NDDB designed and implemented the world's largest dairy development programme called **OPERATION FLOOD.**

23.9.4 Improvement of Livestock Development in India

Improved breeding techniques in cattle have tremendously increased the production of new breeds with high capacities.

Intensive Cattle Development Programme: It is based on cross breeding of indigenous cows with exotic (European) breeds to increase milk production. New methods and modern equipments are made available for machine – milking of cows.

Operation Flood Programme: It is based on dairy commodity aid to increase milk supply in urban areas.

23.10 Aquaculture

Aquaculture is the rearing of economically important aquatic organisms like fishes, prawns, shrimps, crabs, lobsters, edible oysters, pearl oysters and seaweeds under controlled and confined environmental conditions using advanced technologies.

23.10.1 Types of Aquaculture

Aquaculture is classified into:

1. Freshwater aquaculture
2. Marine water aquaculture (Mariculture)

Freshwater aquaculture: The rearing of aquatic organisms in freshwater is called freshwater aquaculture. Culture of organisms is carried out in pond, river, dam, lake and cold water. These freshwater resources remain within the land. Tilapia, carps (Catla, Rohu, Mrigal), catfishes, and air breathing fishes are cultured in freshwater.
