- It is a remedy for ulcers of tongue, stomach and intestine.
- It enhances digestion and appetite.

- Honey bee visits 50 to 100 flowers during a collection trip.
- Average bee will make only 1/12th of a teaspoon of honey in its lifetime.
- One kilogram of honey contains 3200 calories and is an energy rich food.

Points to Remember

- Horticulture, is a branch of agriculture that deals with cultivation of fruits, vegetables, and ornamental plants.
- The organic manures are predominantly derived from plant debris, animal faeces, microbes. They make the soil fertile.
- Mushroom cultivation is a technology of growing mushrooms using plant, animal and industrial waste.
- Hydroponics is the method of growing plants without soil, using mineral nutrient solutions in water.
- The aeroponic system is high-tech type of hydroponic gardening and the growth medium is primarily air.
- Dairy farming involves raising of cattle for milk production.
- Aquaculture is the rearing of economically important aquatic organisms like fishes, prawns, shrimps, crabs, lobsters, edible oysters, pearl oysters and sea weeds under controlled and confined environmental conditions using advanced technologies.
- Pisciculture or fish culture is the process of breeding and rearing of fishes in ponds, reservoirs (dams), lakes, rivers and paddy fields.
- Vermiculture involves the artificial rearing or cultivation of earthworms and using them for the production of compost from natural organic wastes.

A-Z GLOSSARY

Aquaponics	Combination of conventional aquaculture with hydroponics in a symbiotic environment in which plants are fed with the aquatic animals' excreta or wastes.
Compost	Soil conditioner, fertilizer, natural pesticide, a decomposed organic matter which is rich in nutrients.
Floriculture	Production of ornamental plants.
Green manure	Undecomposed green material derived mostly from leguminous plants.
Hydroponics	Soil less growing system in which plants grow in water.
Mariculture	Culture of fishes and other aquatic organism in marine water near the sea coast.
Nectar	Sweet viscous secretion secreted by the flower of plants.
Olericulture	Production of vegetables.
Pisciculture	Culture and rearing of fishes under controlled conditions.
Polyculture	Culture of more than one species of fish in a pond.
Pomology	Production of fruits.
Vermicompost	Vermicompost is the excreta of earthworm.
Vermicomposting	Earthworms degrade organic waste materials into useful product which can be used as a nutrient rich fertilizer.
Vermiculture	Artificial rearing or cultivation of earthworms for the production of vermicompost.
