26. Velocity ratio of gear rive	$\frac{N_2}{N_1} = \frac{T_1}{T_2}$ T_1 and T_2 are the number of teeth on the driving gear and the driven gear. N_1 and N_2 are the number of revolutions of driver and follower
27. Simple gear train	1. If a gear train is arranged by keeping only one gear on a shaft 2. If the total number of gears are in odd number then the first and the last gear & rotates in the same direction.
28. Compound gear train	1. If the gear drive is arranged by keeping more than one gear on a shaft. 2. The net velocity ratio of the gear drive is influenced by the intermediate gear also.

GLOSSARY

1. Spur gear – நேர்பல்லிணை
2. Helical gear – நெளிவுப் பல்லிணை
3. Bevel gear – சரிவுப் பல்லிணை
4. Rack & Pinion – தட்டை மற்றும் சிறு பல்லிணை

ACTIVITIES

1. Make a open belt drive, cross belt drive and chain drive by using scrab material.
