1 INTRODUCTION - ENGINEERING DRAWING

INTRODUCTION

The oldest form of communication among human beings is sharing of ideas through some sort of graphical language. They might have put into use a peculiar equipment to make out images.We can even imagine that ancient men used a stick to scratch messages on sand. Early Egyptians used paint and brushes to make pictures to be used as a form of communication. In the field of Engineering drawing, some special equipment (or) tools are required to make images. At present we use pencil, sketch pad and even computer controlled plotting devices for making drawings.

ENGINEERING DRAWING

Engineering drawing is an effective method of communication between engineers belonging to various disciplines of engineering.All necessary features of an objects are mentioned on the drawing with proper dimensioning and important remarks, The entire community of engineers can analyze the object for its correctness , accuracy of the object's design and modifications .As all the production related remarks and instructions are graphically expressed in the drawing, it is easy for the production process to be carried out .

Engineering drawing is the language engineers. This language is spoken , read and written in its own way. It is used as a means of communicating ideas , concepts and designs to all the others involved in the process of production. Engineering drawing is drawn by an engineer having engineering knowledge for engineering purposes. Engineering drawing is the starting point for all engineering disciplines- Mechanical, Automobiles, Production, Civil, Architectural,Computer,Science, Communication, Instrumentation, Aeronautical, Marine, Agricultural, Mining, Chemical, ,Textile etc.

The view of an objects are drawn initially on a tracking paper and this drawing is known as **original drawing.** Additional copies of the original drawings are taken according to the need and they are called as **Blue prints or Ferro prints .**
