Swab: It is a small brush. It is used for applying small amount of water around the pattern before removing it from the mould. It is also used to give coating on the mould surface.

Swab

Gate Cutter: It is a steel piece with bent end. It is used for cutting gate in the mould. Gate connects the runner hole and the mould cavity.

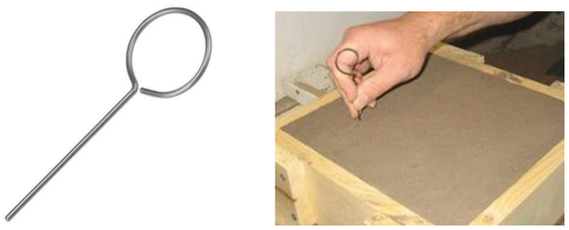

Gate Cutter

Draw Spike: Draw spike is a long steel rod with a pointed or threaded end. The other end has a ring shaped head. It is used for removing the pattern from the mould.

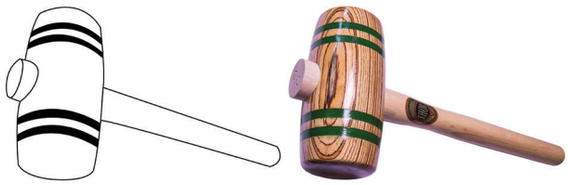

Draw Spike

Vent Rod: It is a long thin steel wire with handle. It is used for making small holes on the mould. During casting, the steam and gases escape through these holes.

Vent Rod

Mallet: It is a hammer made of wood. It is used to fix the draw spike into the pattern by hammering

Mallet

6.8 MOULDING BOXES

It is also called as moulding flask. Moulding box is used to prepare Sand mould. It is a frame, made of wood or metal. It is box with both the bottom and top surfaces are opened. If the moulding is done with two boxes, the upper box is called cope and the lower box is called drag. The two box are aligned correctly with the help of dowel pin. If the moulding is done with three boxes, the middle box is called cheek.

The two types of moulding flasks are

- Snap Flask
- Tight or Box Flask

Snap Flask: It is used for preparing small size moulds in large number. It has
