PART A

STHW1P

Mark 1

Choose the Correct Answer:

1. The transformer may represent as
   a) rotating device
   b) electronic device
   c) static device
   d) none of these
2. Transformer operates on the principle of
   a) self induction
   b) mutual induction
   c) ohm's law
   d) len's law
3. To find the R.M.S value of transformer, E.M.F is to be multiply with
   a) 2.22
   b) 1.12
   c) 1.11
   d) 1.14
4. Transformer core is laminated to reduce the
   a) Copper loss
   b) Eddy current loss
   c) Wintage loss
   d) Hysteresis loss
5. Transformer oil serves the function of
   a) Lubrication
   b) Insulation and cooling
   c) Only insulation
   d) None of these
6. Silicon steel sheets are used to reduce the
   a) Frictional loss
   b) Mechanical loss
   c) Hysteresis loss
   d) Eddy current loss
7. The transformer will work on
   a) AC only c) Both AC & DC
   b) DC only d) None of these
8. The iron core is used to …… of the transformer,
   a) increase the weight
   b) provide tight magnetic coupling
   c) reduce core losses
   d) none of the above
9. The primary and secondary of a transformer are ….. coupled
   a) electrically
   b) magnetically
   c) electrically and magnetically
   d) none of these
10. Conservator is a
    a) main tank of transformer
    b) protective device of transformer
    c) earthing system of transformer
    d) none of these
11. The purpose of conducting open circuit test (O.C) is to determine
    a) eddy current loss
    b) core loss
    c) hysteresis loss
    d) copper loss
