Do You Know?

A tall thunderstorm cloud can hold over 100 million volts of potential. The voltage potential in a lightning bolt is proportional to its length, and varies depending on the diameter of the bolt, air density and impurities of the air.

loosen his clothes and apply cold water on his face and keep him in open air.

If the person does not breathe, then immediately arrange artificial method of respiration for breathing.

There are two methods of artificial breathing.

1.6.1 Holger Nelson Method

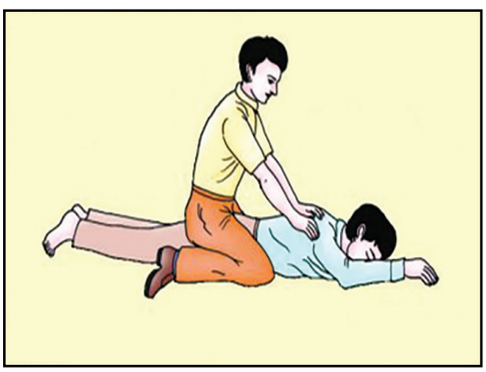

Fig 1.4 *Holger Nelson Method*

In this method, the victim should be kept in the bed facing the ground. The helper sitting at his head should massage his back using both hands. This is done within two seconds.

1.6.2 Mouth to Mouth Method

In this method, the helper pushes air by keeping his mouth on the victim's mouth. By closing his nose, the air is filled in lungs

Activities

A Charged Comb Picking Up Small Pieces Of Paper Due To Static Electricity

Students are asked to do the concept of static electricity by seeing the picture shown.

Do You Know?

When was electricity first used in homes?

Edison's light bulb was one of the first applications of electricity to modern life. He initially worked with J. P. Morgan and a few privileged customers in New York City in the 1880s to light their homes, pairing his new incandescent bulbs with small generators.
