Upto 500	30	150	1	100	1.50
			101	200	2.00
More than					
500	50	150	1	100	1.50
			101	200	3.50
			201	500	4.60
			501	onwards	6.60

Do You Know?

Some Animals use electricity to survive in nature. Many of these animals are found in the ocean where some use electricity to detect objects around them and others use electricity to fend off predators or even hunt for food. One of the most famous of the electric animals is the electric eel. The electric eel can produce large amounts of electricity, even enough to kill a human or stun a large horse. The eels typically swim into a school of fish, discharge a large amount of electricity, and then dinner is served!
