11. Indicate which of the following material does not retain magnetism permanently.
    a) Soft iron
    b) Stainless steel
    c) Hardened steel
    d) None of the above.

12. The material having low retentivity are suitable for making a
    a) weak magnet
    b) temporary magnet.
    c) permanent magnet
    d) none of the above.

13. The absolute permeability (μ_o) of air or vacuum is
    a) $4\pi \times 10^{-7}$ H/M
    b) $4\pi \times 10^{-3}$ Henry/Metre
    c) $4\pi \times 10^{3}$ H/M
    d) $4\pi \times 10^{7}$ H/M

14. Which of the following circuit element stores energy in an electromagnetic field?
    a) Capacitor
    b) Inductance
    c) Resistance
    d) Variable Resistance.

15. EMF induced by motion of conductor across magnetic field is called
    a) emf
    b) dynamic emf
    c) static emf
    d) rotational emf

16. The magnitude of the induced emf in a conductor depends on the
    a) flux density of the magnetic field.
    b) amount of flux cut
    c) amount of flux linkages
    d) rate of change of flux linklages.

Q A PART B

Mark 3

Answer the Questions in briefly

1. What is magnetism?
2. Why is ALNICO used for permanent magnet?
3. State any three uses of permanent magnets.
4. State Maxwell cork's screw rule.
5. What is solenoid and Toroid?
6. What are the uses of solenoid?
7. Define End Rule.
8. Define Faraday's laws of electromagnetic induction.
9. State Flemings right hand rule.
10. Define Lenz's law.
11. What is hysteresis loss?
