Systematics of Human being

KINGDOM
Animalia - Animals are multicellular eukaryotic organisms

PHYLUM
Chordata – Animals with a notochord or vertebral column (Back bone)

CLASS
Mammalia – Body covered with hair or fur. Mammary glands are present

ORDER
Primata – Mammals with forward looking eyes and grasping fingers

FAMILY
Hominidae – Primates with relatively flat faces and binocular vision

GENUS
Homo – Hominids with large brain and upright posture

SPECIES
sapiens – Bipedal and higher intelligence

Phylum: The group of classes with similar distinctive characteristics constitute a phylum. The classes Pisces, Amphibia, Reptilia, Aves and Mammalia constitute the next higher category, phylum Chordata. These classes share some common features like presence of a notochord and a dorsal tubular nerve cord hence included in the phylum Chordata.

Kingdom: All living animals belonging to various phyla are included in the Kingdom Animalia and it is the top most of the taxonomic hierarchy.

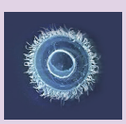

Recently discovered species in South India

Scientists have discovered a new and unusual species of frog in the Western Ghats in India in August 2017. The frog has shiny, purple skin, a light blue ring around its eyes, and a pointy pig-nose. It is named as Bhupathy's purple frog (*Nasikabatrachus bhupathi*) to honour Dr.Subramaniam Bhupathy, herpetologist who lost his life in the Western Ghats in 2014.

DO YOU KNOW?

In July, 2017, a 9 years old boy discovered a new Freshwater species of Jellyfish in the Kodaikanal lake, Tamilnadu.

DO YOU KNOW?

A newly discovered Himalayan forest thrush bird was named after the birdman of India, Ornithologist Dr. Salim Ali. The name of the bird is "*Zoothera salimalii*". A fruit bat is also named after him "*Latidens salimalii*"
