I. Identify the given animal 'A' (picture/specimen) and write any 2 diagnostic features with diagram.

1. SPONGILLA

Identification:

The given specimen is identified as ***Spongilla***. It belongs to the Phylum **Porifera.**

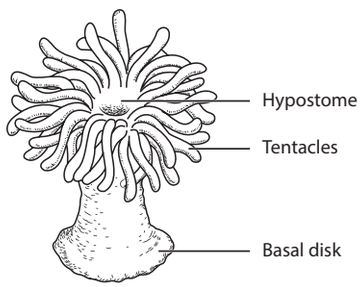

Reasons for identification:

- It is a pore bearing animal.
- It is an aquatic multicellular animals with cellular level of organization.
- It possess a canal system where the water enters into the central cavity, spongocoel through minute pores called ostia.
- The spongocoel is lined with special flagellated cells called choanocytes.

2. SEA ANEMONE

Identification:

The given specimen is identified as **Sea anemone.** It belongs to the Phylum **Cnidaria.**

Reasons for identification:

- Sea anemone is diploblastic and the first group of animals to exhibit tissue level of organization.
- It has stinging cells called nematocysts on their tentacles.
- The central vascular cavity is called coelenteron which opens out through the hypostome.
- The nervous system is formed of a diffused nerve net.
- Cnidarians exhibit 2 basic body forms, polyp and medusa.
- The polyp represents the asexual generation and the medusa represents the sexual generation (Alternation of generation).
- Development includes a ciliated Planula larva.
