III. Identify and comment on the given bone/joint 'C'.

1. HUMERUS BONE

Identification:

The given specimen/picture kept for identification is the **human – humerus bone.**

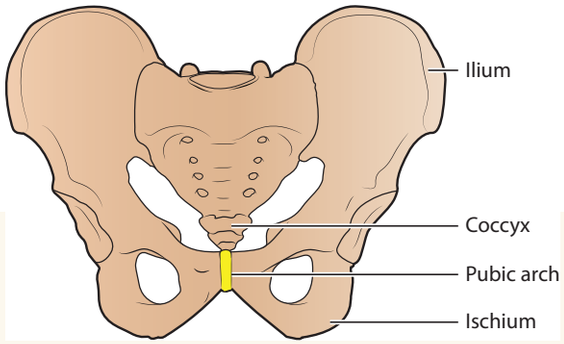

Comments:

- It is found between the shoulder and elbow.
- The head of humerus articulates with the glenoid cavity of the pectoral girdle.
- The other end of the humerus articulates with the two forearm bones namely the radius and ulna.

2. PELVIC GIRDLE

Identification:

The given specimen kept for identification is the **human pelvic girdle**.

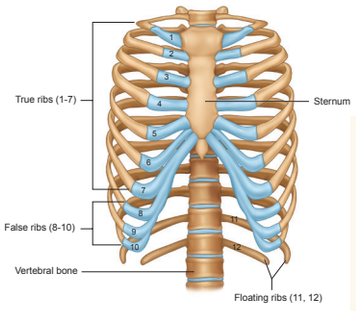

Comments:

- It is composed of 2 hip bones called coxal bones together with the sacrum and coccyx.
- It is a heavy structure specialized for weight bearing.
- Each coxal bone consists of 3 fused bones namely the ilium, ischium and pubis.
- At the point of fusion of the 3 bones, a socket called acetabulum is present.
- The acetabulum is meant for the articulation of the lower limbs.

3. RIB CAGE

Identification:

The given specimen kept for identification is the **human ribcage**.

Comments:

- There are 12 pairs of ribs.
- Each rib is connected dorsally to the vertebral column and ventrally to the sternum.
