4. ECG GRAPH

Identification:

The picture kept for identification is an ECG graph.

Significance:

- An ECG records the electrical activities of the heart over a period of time.
- The special flap of muscle called the Sino auricular node in right atrium initiates the heart beat.
- The waves of the ECG are due to depolarization and not due to contraction of the heart.
- A normal ECG shows 3 waves designated as 'P' wave, 'QRS' complex and 'T'wave.

VI. 1. Identify the given sample solution 'F' f or the presence/activity of salivary amylase/ ammonia/urea.

2. Observe and write about the given 'G' experiment / specimen / picture. Determine Your Blind Spot / Identify the sex of cockroach

1. TEST FOR AMMONIA

Aim : To test the presence of Ammonia in the given sample solution.

Materials Required: Test tube and holder.

Solution Required: Sample solution and Nessler's Reagent.

Procedure:

1) Take 2ml of the given sample solution in a clean test tube.
2) Add few drops of Nessler's reagent in the test tube containing sample solution.
3) Appearance of dark yellow/brown colour confirms the presence of Ammonia in the given sample.

Inference: It is inferred that ammonia is present in the given solution.

2. TEST FOR UREA

Aim: To test the presence of urea in the given sample solution.

Material Required: Test tube, sample solution, test tube holder and pipette / dropper.

Required Reagents: Phenol red and Horse gram powder (which contains the enzyme urease).
