3. Glycolysis takes place in _____.

4. The source of O_2 liberated in photosynthesis is _____.

5. _____ is ATP factory of the cells

III. State whether the statements are true or false. Correct the false statement.

1. Phloem tissue is involved in the transport of water in plant.
2. The waxy protective covering of a plant is called as cuticle.
3. In monocot stem cambium is present in between xylem and phloem.
4. Palisade parenchyma cells occur below upper epidermis in dicot root.
5. Mesophyll contains chlorophyll.
6. Anaerobic respiration produces more ATP than aerobic respiration.

IV. Match the following

1. Amphicribal	-	*Dracaena*
2. Cambium	-	Translocation of food
3. Amphivasal	-	Fern
4. Xylem	-	Secondary growth
5. Phloem	-	Conduction of water

V. Answer in a sentence

1. What is collateral vascular bundle?
2. Where does the carbon that is used in photosynthesis come from?
3. What is the common step in aerobic and anaerobic pathway?
4. Name the phenomenon by which carbohydrates are oxidized to release ethyl alcohol.

VI. Short answer questions

1. Give an account on vascular bundle of dicot stem.
2. Write a short note on mesophyll.
3. Draw and label the structure of oxysomes.
4. Name the three basic tissues system in flowering plants.
5. What is photosynthesis and where in a cell does it occur?
6. What is respiratory quotient?
7. Why should the light dependent reaction occur before the light independent reaction?
8. Write the reaction for photosynthesis?

VII. Long answer questions

1. Differentiate the following
   a) Monocot root and Dicot root
   b) Aerobic and Anaerobic respiration
2. Describe and name three stages of cellular respiration that aerobic organisms use to obtain energy from glucose.
3. How does the light dependent reaction differ from the light independent reaction? What are the end product and reactants in each? Where does each reaction occur within the chloroplast?

VIII. Higher Order Thinking Skills(HOTS)

1. The reactions of photosynthesis make up a biochemical pathway.
   A) What are the end product of light and dark reaction of photosynthesis?
   B) Explain how the biochemical pathway of photosynthesis recycles many of its own reactions and identify the recycled reactants.
2. Where do the light dependent reaction and the Calvin cycle occur in the chloroplast?
