3. Wearing loose clothing rather than tight fitting clothes will ensure the airflow around the genitals and prevent sweating.

## More to Know

Every year May 28 is observed as Menstrual Hygiene day to make girls and women aware of maintaining menstrual hygiene and importance of menstrual hygiene for good health. By way of awareness through films, discussions and campaigns menstrual hygiene has taken quite the centre stage in recent days.

### Napkin hygiene

The parents and teachers are to create awareness among the school girls about the use of napkins and their proper disposal. Girls should be educated in the following ways

1. The sanitary pad and tampons should be wrapped properly and discarded because they can spread infections.
2. Sanitary pad or tampon should not be flushed down the toilet.
3. Napkin incinerators are to be used properly for disposal of used napkins.

## Info bits

The menstrual hygiene scheme to provide subsidized sanitary napkins was launched by the Health ministry in 2011.

In Tamil Nadu, UNICEF has developed an affordable incinerator that uses firewood to handle sanitary napkin waste at schools and special wells are equipped where sanitary napkins are composted.

## Points to Remember

- Many bacteria and protozoa simply divide into two or more daughter cells by fission.
- Organisms such as hydra can regenerate if they are broken into pieces. They can also give out buds which mature into new individuals.
- Reproduction in flowering plants involves transfer of pollen grains from the anther to the stigma which is referred to as pollination. This is followed by fertilization.
- Sexual reproduction involves the fusion of two haploid gametes (male and the female gametes) to form a diploid individual (zygote).
- The formation of the sperm in male and the ovum in female is called gametogenesis. It involves spermatogenesis (formation of spermatozoa) and oogenesis (the formation of ova).
- The cyclic events that take place in a rhythmic manner during the reproductive period of a woman's life is called menstrual cycle.
- The process of attachment of the blastocyst to the uterine wall (endometrium) is called implantation.
- The placenta is a temporary association between the developing embryo and maternal tissues.
- Parturition is the expulsion of young one from the mother's uterus.
- Contraception is one of the best birth control measures. The devices used for contraception are called contraceptive devices.

## TEXTBOOK EVALUATION

QIDAN7

### I. Choose the correct answer

1. The plant which propagates with the help of its leaves is _____ .
   a) Onion b) Neem
   c) Ginger d) *Bryophyllum*

2. Asexual reproduction takes place through budding in _____ .
   a) *Amoeba* b) Yeast
   c) *Plasmodium* d) Bacteria
