5.3 TILES

Learning Objectives

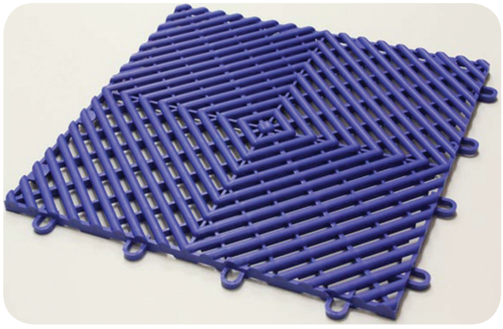

At the end of this lesson you shall be able to

- State the types of tiles.
- Understand the uses of tiles.

TF7BJM

5.3.1 Introduction

Tiles are used for various purposes in building industry. They are thinner than bricks and hence should be carefully handled to avoid any damage.

5.3.2 Types of Tiles and Their Uses

1. Drain tiles
2. Floor tiles
3. Roof tiles

5.3.2.1 Drain Tiles

These tiles are prepared in such a way that they retain porous texture after burning. If the tiles are used in water logged areas, they allow sub soil water to pass through their holes. They are also used to convey irrigation water. Such drain tiles are rarely adopted in modern times.

DO YOU KNOW?

When was the first tile made?

In 14000 BC the first tile was made at Mesopotamia in Iraq. The maximum size of a tile was 300 cm × 150 cm – giant tiles

5.3.2.2 Floor Tiles

Floor tiles may be square or rectangle in shape. These are flat tiles and their thickness varies from 6.5 mm to 14 mm. As the floor tiles are hard and tough, there is minimum wear and tear. To prepare coloured floor tiles, colouring substance is added in the clay at the time of its preparation. Floor tiles
