

6.1.4.5. Inverted Arch Footing

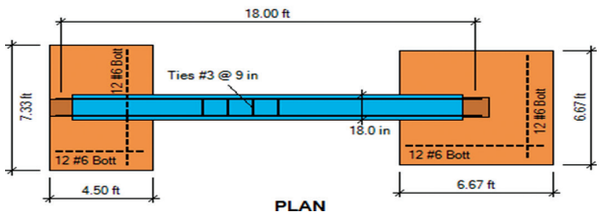

While forming the foundation on soft and fine soil these footings are used to reduce the depth of foundation. Through the inverted arch the whole load acting are transferred by spreading to wider area. Mostly these are used for bridges and multi-storeyed building in olden days. As it is curve in shape it bears heavy load due to its arch action. This type is rarely adopted now-a-days.

6.1.4.6 Strap Footing

BURJ KHALIFA.

The 'Burj Khalifa' is a mega tall skyscraper in Dubai, United Arab Emirates.

Total height is 829.8m (2,722 ft). It has been the tallest structure in the world since its topping out in late 2008.

ACTIVITY 1

Prepare a report about 'Burj Khalifa' with pictures.

Strap footing consists of two or more individual footings connected by a RC beam. These beams are called strap beams. This type of footing may be used where the distance between the columns is more.

6.1.4.7. Grillage Foundation

These foundations are used to transmit heavy loads from steel column to the soils
