that they sloped downward to the outside in order to run off the rain water and obstruct the horizontal vision. It may be fixed or pivoted. These are commonly used in residential buildings.

7.2.4.9 Collapsible Doors

These doors are used for shops, garages, public buildings, godowns, etc., and in situations where width of opening is large. The door essentially consists of vertical double channels each 20 x 10 x 2mm in size and spaced at 10 to 12 cm apart. These are braced with flat iron diagonals 20mm wide and 5 mm thick. The door shutter slides over rollers mounted in position by the rails. This door is also used for residences to increase safety and protection.

7.2.4.10 Revolving Door

This door essentially consists of four leaves radially attached to a centrally placed mullion in a circular opening. The leaves may be glazed, panelled or partly glazed. Such doors are commonly provided in hotels, banks, offices, ATM Centres and other such important public buildings.
