THFMBJ

### 8.2.1 Introduction

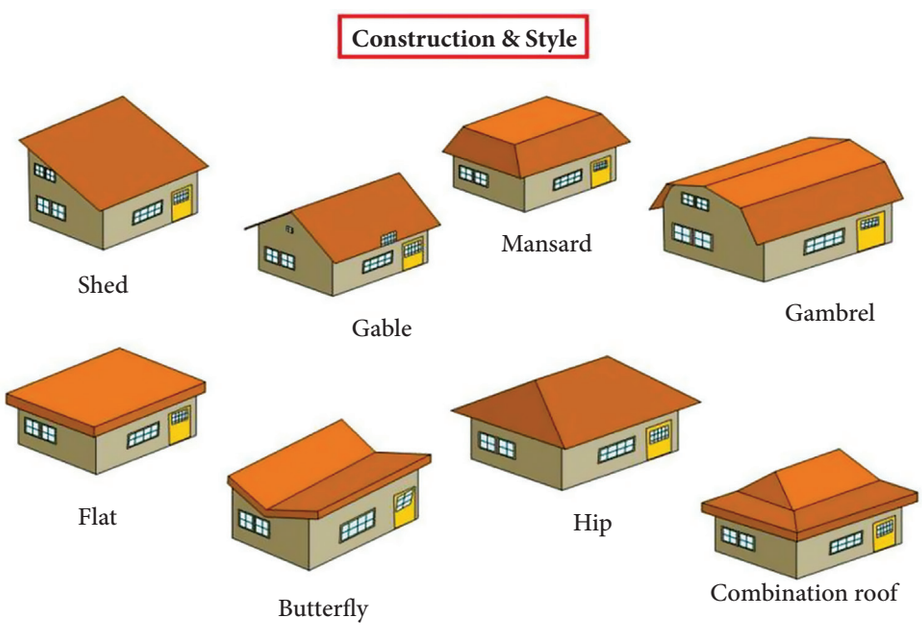

A roof is the uppermost part of a building, provided as a structural covering to protect the building from rain, sun, wind, etc. Roof protects the building from the damages starting from the top.

### 8.2.2 Requirements of a Good Roof

The following requirements are to be satisfied by a well planned roof.

i. It should be durable against the adverse effects of wind, sun, rain, etc.

ii. It should give good insulation against heat and sound.
