7	Marine Products	1 – 2% like sea shells, etc.	0%
8	Eco friendly	Harmful to environment. Eco imbalances, reduce ground water level and river water gets dried up.	Though M sand uses natural coarse aggregates to form, it causes less damage to environment as compared to river sand.
9	Applications	Recommended for RCC plastering and brick / block work.	Highly recommended for RCC purposes and brick / block works.
10	Quality	No control over quality since it is naturally occurring. Same river bed sand can have differences in silt content.	Better quality control since manufactured in a controlled environment.
