TABLE OF CONTENTS

4.1 Cement
- 4.1.1 Introduction
- 4.1.2 Types of Cement
- 4.1.3 Types of Artificial Cement
- 4.1.4 Field Tests for Cement
- 4.1.5 Required Properties of Portland Cement
- 4.1.6 Grades of Cement
- 4.1.7 Storage of Cement

4.2 Mortar
- 4.2.1 Introduction
- 4.2.2 Definition
- 4.2.3 Properties of Good Mortar
- 4.2.4 Types of Mortar
- 4.2.5 Preparation of Cement Mortar
- 4.2.6 Uses of Mortar
- 4.2.7 Precautions to be taken in Using Mortar
- 4.2.8 Required Strength of Mortars in Masonry

4.3 Concrete
- 4.3.1 Introduction
- 4.3.2 Definition
- 4.3.3 Ingredients of Concrete
- 4.3.4 Water – Cement Ratio
- 4.3.5 Preparation of Cement Concrete
- 4.3.6 Compaction of Concrete
- 4.3.7 Curing of Concrete
- 4.3.8 Properties of Concrete
- 4.3.9 Uses of Concrete
- 4.3.10 Types of Concrete
- 4.3.11 Other types of Concrete
- 4.3.12 Precautions to be Taken during Transportation and Placing of Concrete
- 4.3.13 Grades of Concrete

4.1 CEMENT

Learning Objectives

At the end of this lesson you shall be able to

- Know the types of cement.
- Explain artificial cement and its types.
- Know the field tests for cement.
- State the properties of Portland cement.
- Understand the storage of cement and grades of cement.

4.1.1 Introduction

Cement is the most important material in building construction. To a layman the term cement means Portland cement. Cement is manufactured from lime stone and clay. It is available in powder form, when mixed with water can set to a hard mass even under water.
