6. When a molecule or ion is reabsorbed from the lumen of the nephron, where does it go? If a solute is filtered and not reabsorbed from the tubule, where does it go?
7. Which segment is the site of secretion and regulated reabsorption of ions and pH homeostasis?
8. What solute is normally present in the body to estimate GFR in humans?
9. Which part of the autonomic nervous system is involved in micturition process?
10. If the afferent arteriole of the nephron constricts, what happens to the GFR in that nephron? If the efferent arteriole constricts what happens to the GFR in that nephron? Assume that no auto regulation takes place.
11. Concentration of urine depends upon which part of the nephron
    a. Bowman's capsule
    b. Length of Henle's loop
    c. P.C.T.
    d. Network of capillaries arising from glomerulus
12. If Henle's loop were absent from mammalian nephron, which one of the following is to be expected?
    a. There will be no urine formation
    b. There will be hardly any change in the quality and quantity of urine formed
    c. The urine will be more concentrated
    d. The urine will be more dilute
13. What will happen if the stretch receptors of the urinary bladder wall are totally removed?
    a. Micturition will continue
    b. Urine will be continue to collect normally in the bladder
    c. There will be micturition
    d. Urine will not collection the bladder
14. The end product of Ornithine cycle is
    a. carbon dioxide b. uric acid
    c. urea d. ammonia
15. Identify the wrong match
    a. Bowman's capsule - Glomerular filteration
    b. DCT - Absorption of glucose
    c. Henle's loop - Concentration of urine
    d. PCT - Absorption of Na^+ and K^+ ions
16. Podocytes are the cells present on the
    a. Outer wall of Bowman's capsule
    b. Inner wall of Bowman's capsule
    c. Neck of nephron
    d. Wall glomerular capillaries
17. Glomerular filtrate contains
    a. Blood without blood cells and proteins
    b. Plasma without sugar
    c. Blood with proteins but without cells
    d. Blood without urea
18. Kidney stones are produced due to deposition of uric acid and
    a. silicates
    b. minerals
    c. calcium carbonate
    d. calcium oxalate
19. Animal requiring minimum amount of water to produce urine are
    a. ureotelic b. ammonotelic
    b. uricotelic d. chemotelic
