UNIT I

Chapter 1

The Living World

Chapter Outline

1.1. Diversity in the Living world
1.2. Need for Classification
1.3. Taxonomy and Systematics
1.4. Three Domains of life
1.5. Taxonomic Hierarchy
1.6. Nomenclature
1.7. Concept of Species
1.8. Tools for study of taxonomy

"Our task must be to…
embrace all living creatures and
the whole of nature and its beauty."
— Albert Einstein

Learning Objectives:

- *Learns the importance of the living world and its diversity*
- *Understands the need for classification*
- *Creates an interest in systematics and understands the importance of taxonomy for classification of animals*
- *Knows the key rules of nomenclatures and their uses*

67VHIT

All living forms co-exist with each other. There are about 8.7 million species of organisms have been estimated to exist on earth. A study reports that 86% of all species on the land and 91% of those in the seas are yet to be discovered, described and catalogued. Though humans are placed in the top most position on the hierarchy, they have to depend on plants and animals for food. Animals are also used as source of labour, in farming, as pets, and for other economic benefits. Understanding animals and their unique characteristics, habitats, behaviour and evolutionary relationships is very important. This chapter deals with, diversity in the living world, need for classification, types of classification, taxonomical hierarchy, nomenclature and tools for studying taxonomy.

1.1 Diversity in the Living World

Earth has numerous habitats with a wide range of living organisms inhabiting them. Plants and animals are present in almost all the places, from polar icecaps to volcanic hot springs, from shallow lagoons to the deepest oceans, from tropical rain forests to dry and parched deserts. There are a variety of species that have been adapted successfully to live in diverse ecosystems.
