STAGES OF HUMAN EVOLUTION

Australopithecus

Between 4 million and 2 million years

(Proto-human) Evolved in eastern Africa ("southern ape")

A mix of human and ape traits
Bipedal walk (walking on two legs)

Homo habilis

Between 2.3 and 1.4 million years.

(Proto- human)

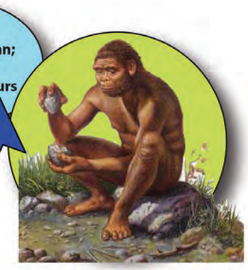

Presence of big toe to hold tightly and less protruding face. Tool maker

Homo erectus

Approximately 1.8 Million years ago

(Java man) Not fully human; brain smaller than ours

Walked in a straight position (Posture). He had the knowledge of the fire

Neanderthal

Between 130,000 and 40,000 years.

(not fully human)

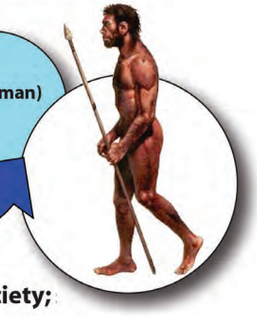

Different from Africans. Their tools were crude. Hunting skills were also poor. There are evidences of burying the dead. Evidences are seen at Neanderthal in Germany.

Homo Sapiens

300,000 years ago

(wise man)

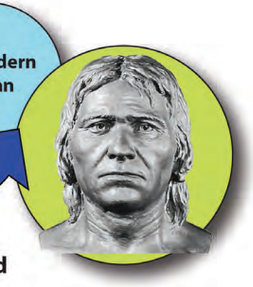

Modern human being; hunting and gathering society; still used crude stone implements. Moved out of Africa and settled in Europe and Asia.

Cromagnons the present Man

50,000 years ago in eastern Africa and 40,000 years ago in West Asia and in south-eastern Europe.

The modern human

Beginning of human life; used not only implements made of stone but also of bone. Their weapons included harpoons and spear-throwers.
