2 The Lungs

The lungs are the primary organs of the respiratory system. They are paired, cone-shaped organs. They are located in the thoracic chamber (rib cage) on both sides of the heart.

3 Muscles of respiration

Muscles of respiration include diaphram and intercostal muscles. They help to push the air in and out of the lungs during breathing.

Do you know?

- Air pollution causes many respiratory diseases.
- Smoking can cause lung cancer.

III. Circulatory System

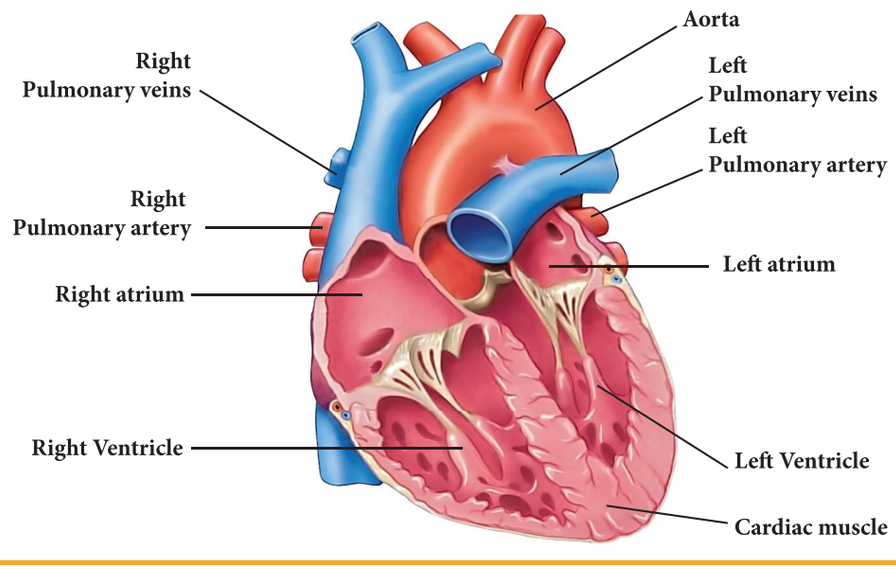

In this system blood is circulated to transport oxygen and nutrients to every part of the body. Circulatory system consists of the following:

1. Heart
2. Blood vessels
3. Blood

1 Heart

The heart is a hollow, muscular organ. It is somewhat conical in shape. It is covered with double walled membrane called pericardium. The space between the membranes is filled with pericardial fluid. The pericardial fluid protects the heart from shock. Heart is placed inside the thoracic chamber (rib cage) in between the two lungs.
