1 Central nervous system

Central nervous system consists of the brain, the spinal cord and the nerves.

❖ Brain

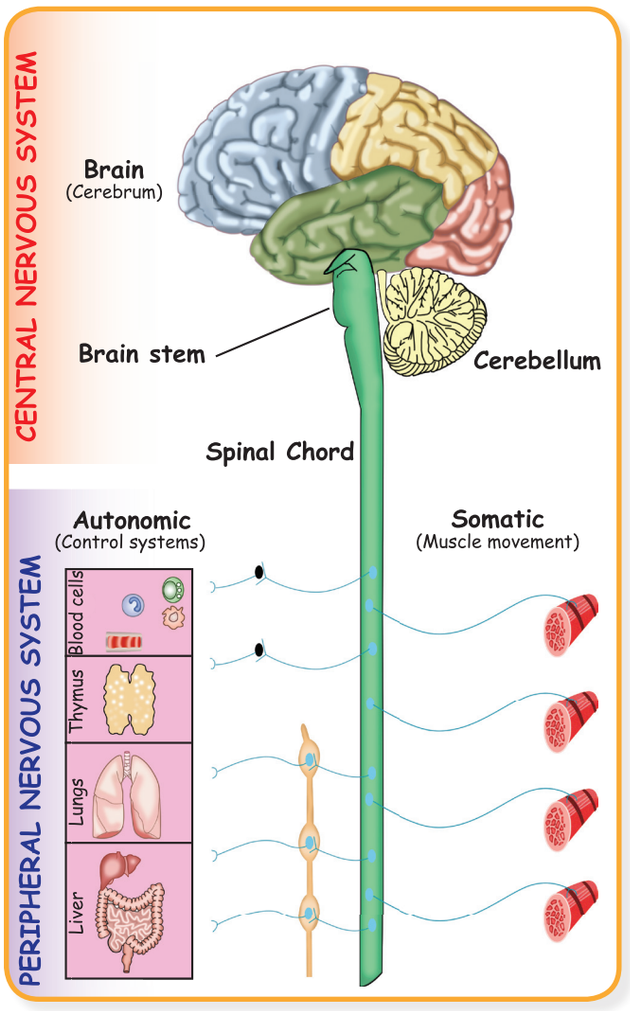

We use our brain to think, read and write. The brain is covered by three membranes called meninges. They are dura mater, arachnoid membrane and pia mater. The meninges protect the CNS from mechanical shock. It is made up of eight immovable bones. The brain is made up of millions of functional units called Neurons.

Human brain is divided into three major parts.

Fore Brain

Mid Brain

Hind Brain

Fore Brain

- The fore brain consists of cerebrum, thalamus and hypothalamus.
- It is the largest part of the brain.
- It is the centre of human memory.
- It is responsible for intelligence, imagination and reasoning.

Do you know?

Average weight of human brain is 1.300 kg

Mid Brain

- It lies behind the cerebrum.
- It co-ordinates the movements of the muscles of the body.
- It regulates vision, hearing, sleep and body temperature.

Hind Brain

- The hind brain comprises of pons and medulla oblongata.
- It is also called the brain stem.
- It is called 'vital knot' because it controls breathing, heart beat and other involuntary muscles.
- It connects the brain to the spinal cord.
