Recyclable wastes: Paper, Glass, Metals, Plastics.

Soiled wastes: Cloths soiled with blood and other body fluids.

e-wastes: Computer parts, Electronic materials, Cell phone parts, CFL bulbs.

Do you know?

- 40 million tons of electronic waste is generated every year worldwide.
- e-waste comprises 70% of our overall toxic waste.
- e-waste contains hundreds of substances, of which many are toxic.

Activity 4

Collect the wastes from your house before it is thrown into dustbin. Separate them into two groups.

Group 1: Garbage from the kitchen like fruit and vegetable peel, egg shells, waste food, tea leaves, news papers, dry leaves and paper bags.

Group 2: Pieces of cloth, polythene bags, broken glass, aluminum wrappers, nails, old shoes and broken toys.

Find out how you can dispose them properly.

2 Wastes from School

Do you know?

Each one in our state capital (Chennai) contributes 700 gram of waste everyday. It is the highest in our country.

You leave many waste materials inside your class rooms and throw away many things in the school campus. If they are not collected and disposed properly, your environment will be polluted. Papers, pen and its parts, blades, chocolate covers and plastic items are found in the school environment. The single most common material generated in schools is food waste. Food is not only wasted but it is also thrown away everywhere, making your surrounding unclean.

In a survey conducted, it is found that food waste accounts for 23.9% of the total wastes generated in the school and recyclable paper like card board, white paper and mixed papers accounted for 23.5% of the total waste. To keep our surrounding clean, we need to have a proper waste disposal system.
