Solar Radiation

The sun is the only source of light to all the planets in the solar system. The land, water and air in our planets receives heat from the sun. The Earth receives heat energy from the Sun in the form of radiation. It is called **solar radiation**.

Elements of climate

1) Temperature **2)** Pressure **3)** Wind **4)** Clouds **5)** Rainfall

1) Temperature

- Land – Conduction
- Water – Convection
- Atmosphere - Terrestrial radiation

The earth has the capacity to reflect the sun's rays. The temperature is not same every where. **Latitude, altitude, distance from the sea, position of the mountains** are some of the factors that determine the temperature of a place.

The imaginary lines drawn horizontally on the Earth surface from West to East are called **latitudes.**

The imaginary lines drawn Vertically on the Earth surface from North to South are called **Longitudes.**

Latitudes and Longitudes help us to locate a place correctly.
